

**Title**

Allogeneic Stem Cell Delivery for Cats with Chronic Kidney Disease. Phase I - Safety

Purpose

Chronic kidney disease is a major cause of debilitating illness in older cats.

In this study researchers will investigate whether administration of stem cells to cats with chronic kidney disease is safe and helps improve kidney function and survival time. The stem cells will be obtained from donor patients and be given intra-arterially (IA) under general anesthesia.

Eligibility

- To be eligible for this study, patient's health should be as follows:
- Age limit: not over 16 years of age
- No other systemic illness
- No uncontrolled infections
- No urinary tract stones
- Controlled blood pressure
