

# Children's Resources: X-Rays

## Word of the Day: X-Ray

X-rays are beams that can pass through the body. When a veterinarian takes an x-ray, they are using these beams to take a picture of the inside of an animal's body. X-rays help veterinarians see an animal's bones, chest, and stomach. X-rays can help veterinarians figure out why an animal is sick or where they are hurt.

## Discussion Questions

- Have you ever had an x-ray? What was it like?
- Why do you think it is important for veterinarians to see the inside of an animal's body?

## X-Rays can help veterinarians detect...

### Bone Fractures

Bone fractures are breaks in a bone.

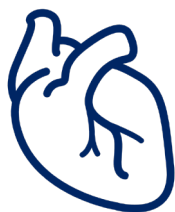

### Foreign Bodies

Foreign bodies are objects not meant to be inside the body.

### Tumors

A tumor is swelling in an area of the body due to tissue growth.

### Heart Problems

X-rays can help veterinarians assess heart disease.

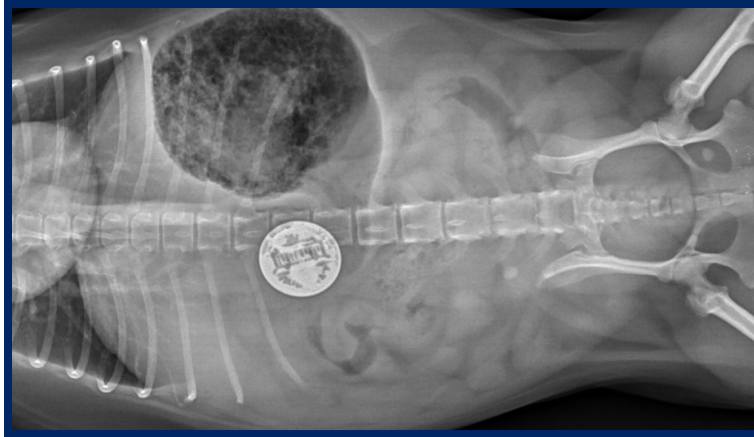

### Pneumonia

Pneumonia is the inflammation, or swelling, of lungs.

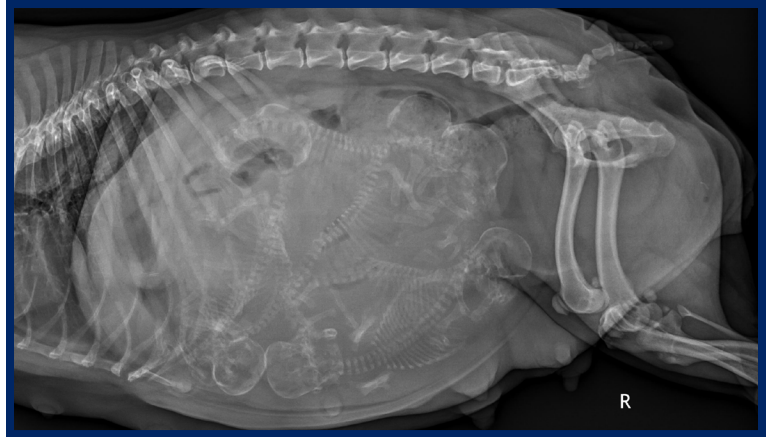

# Children's Resources: X-Rays

What's happening in these x-rays? *(answers on back)*

3

# Children's Resources: X-Rays

## Answers

1 Duck

2 Guinea Pig

3 Turtle

## Activities

### PreK - 2<sup>nd</sup> Grade

#### Build a Skeleton

*Materials: black construction paper, glue, scissors, cotton swabs, crayons*

- Your child can make their very own x-ray of a skeleton with just a few household items!
- Use cotton swabs as pretend "bones" and arrange them into the shape of your desired animal. Cut and glue the cotton swabs onto black construction paper to give it an x-ray image effect! You can also use a white crayon to help fill out any details.

### All Ages

#### X-Ray Challenge

*Materials: x-ray sheets on Pages 2 and 4*

- Challenge your friends and family to guess what's going on in the x-rays on Pages 2 and 4!
